-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Specification***

1. The disclosure is objected to because of the following informalities: Proper sectional headings have been omitted from the specification. Appropriate correction is required.

### ***Claim Objections***

2. Claim 75 is objected to because of the following informalities: there is no guide disc in claim 71. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 39-45, 51, 52, 56-60, 64-66, 71-73, 75, and 76 rejected under 35 U.S.C. 102(b) as being anticipated by Takeuchi et al (5085045).

Takeuchi teaches a device (Figure 1) for winding a strand on a winding element comprising a frame having at least an inlet, a winding element (42) rotatably driven about a winding shaft via a drive means (2a) having a driving roller (27) in abutment with the winding element by tension or gas spring (31d) and located outside the frame, guide wheels (23), brake means, slackening guide disc, and twisting means (32) including at least one radially extending arm with a feed through channel and guide eye mounted on the frame and bored twisting shaft (1) at a right angle in line with the axis of the winding shaft, all in bearings in the shaft, with the

first end of the twisting shaft located within the frame and the second end located outside the frame.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 46-50, 53-55, and 74 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takeuchi in view of the German Patent (3150610).

Takeuchi essentially teaches the invention as detailed above, but fails to specifically teach that a ceramic bore in the twisting arm, which the German Patent teaches (Figures). It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to have utilized the bore of the German Patent in the device of Takeuchi, so as to protect the twisted strand while limiting ballooning. The ordinarily skilled artisan would have understood the benefits of such strand protection and known to utilize the bore, improving quality of the finished product. In regards to the use of a magnetic coupling, such is well known in the art as a passive type of brake, chosen from many available varieties, and all within the abilities of the ordinarily skilled artisan.

***Allowable Subject Matter***

7. Claims 61-63 and 37-70 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kross (6244028), Doherty (6318062), and Brazeau (6141948) teach what is well known in the art.
